Professional Summary

Junior Software Engineer specializing in backend engineering and web development. Built multiple production-ready applications using Go, Docker, and REST APIs through an intensive, project-based curriculum. Proficient in HTTP server architecture, responsive UI design, and interactive third-party integrations. Currently expanding expertise in microservices and cloud deployment.

Technical Skills

Languages: Golang, Javascript

Frameworks: Gin

Infrastructure and Tools: Git, Docker, Linux, REST APIs

Projects

INKA LittUp Web Platform | [LittUp](#)

- Engineered a fully mobile-responsive production web platform for a regional electrical engineering enterprise to drive client acquisition.
- Built custom Lightbox visual media galleries and integrated automated lead routing via web contact forms and WhatsApp API.

Propersats | [GitHub](#)

- Participated in developing a mobile-first real estate escrow web app with sub-second Lightning Network payments to eliminate land-selling related fraud.
- Took part in building a 2-of-2 multi-sig escrow approval logic for surveyors/lawyers, multi-stakeholder dashboards, and Playwright/pytest test suites.

WORK EXPERIENCE

Software Engineer at Zone01 Kisumu

Jun 2026 - Present

- Build backend applications in Go, applying clean code principles and modular design.
- Solve algorithmic problems and manage version control workflows using Git and GitHub.
- Collaborate with peers on production-style projects, following software engineering best practices.

EDUCATION

- BSc Analytical Chemistry with Management
